

SEER and Japanese A-bomb Survivor Data

SEERaBomb uses ASCII text SEER data available from <http://seer.cancer.gov/data/options.html>. Please unzip this into `~/data/SEER` such that the folder `populations` holds person-year-at-risk files and the folder `incidence` holds cancer files. A-bomb survivor data from http://www.rerf.jp/library/dl_e/index.html should similarly be placed into `~/data/abomb`. Use of these defaults will simplify running scripts.
