1 R and L^AT_EX

This is an Rnw document. L^AT_EX is a (*not so*) simple formatting syntax for authoring PDF documents. For more details on using L^AT_EX see <https://www.overleaf.com/learn>.

When you click the ****Knit**** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)

##      speed      dist
##  Min.   : 4.0    Min.   :  2.00
## 1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##   Mean  :15.4    Mean   : 42.98
## 3rd Qu.:19.0    3rd Qu.: 56.00
##   Max.  :25.0    Max.   :120.00
```

2 Including Plots

You can also embed plots, for example:

Note that the ‘echo = FALSE’ parameter was added to the code chunk to prevent printing of the R code that generated the plot.

```
/*A wrong sql chunk chunk with no name but options*/
```

```
# A void code block
```

End of the document
